

Welcome to the Jabatix online documentation!

is a complete, component-based software development and production environment for batch applications on application servers based on standard technologies.

Key features include: easy access to a wide variety of data sources; ability to add value through powerful scripts (Groovy, and the Cantor DSL developed by Jabatix S.A.); process automation feature; multiple reporting engines; Java-based and -enabled; and implemented on the Eclipse interactive development environment and platform.

Learn more in our documentation section about the features, interfaces, and capabilities of Jabatix and how to apply them:

- **Jabatix Workbench User and Reference Guides** documents the workbench features and functions delivered via the Eclipse platform
- **Jabatix Enterprise Edition** documents the features and functions that extend the Workbench to the enterprise-level
- **Jabatix Partner Edition** offers an attractive pricing model for partners and their customers, which includes all the relevant technical functions of the Enterprise Edition, but is licensed only for third-party offerings (this means that a partner's customers must purchase the Partner Edition through Jabatix S.A. or through the partner)
