

Example projects

For the registered user, several sample projects are available for download as a *model archive file* (.zip) on the website www.jabatix.net. Sample projects should not be used as templates for production code.

After downloading the single example archive, it can be imported using the *Import Model Archive* selection in from the *File* menu. Details on importing an archive or multiple archives are available under *Importing a project* in the *User Guide* section under *Workbench*.

The pages below this one describe the available sample projects.

To import multiple example archives at once you can select *Model Archives From Folder*. In the following wizard you are able to select individual and multiple files as needed.
