Data Quality

Data quality management is divided into three parts "Validation", "Enhancement" and "Reconciliation".

- Validation provides various functions for data quality, see Data Validation for more details.
- Enhancement means the addition of undelivered deal information such as day count conventions or calendar rules, see Data Enhancement for more details.
- Reconciliation contains reports and functions to compare different values against the delivery system, see Data Reconciliation for more details.
- Process Controls in Finance and Risk Management.
