

Life Cycle Management

The Jabatix module 'Life Cycle Management' covers all the important and central loan management functions. This includes a clearly arranged cockpit, detailed data storage for lending operations as well as the mapping of numerous business transactions and the associated processes.

The accounting/reporting and loan application modules can be connected seamlessly on the basis of the Jabatix ETL standard or the API web service. In addition, other systems such as customer management systems can be integrated easily.

The following types of credit and loans are supported:

- Annuity loans
- Amortised loans
- Bullet loans
